

Acute angles
Any angles
that measure less than $90^{\circ}$

Obtuse angles Any angles that measure more than $90^{\circ}$ and less than $180^{\circ}$

Protractors are used to measure angles

## Types of Lines

Reflex angles Any angles that measure more than $180^{\circ}$

## Right angle

An angle that measures exactly $90^{\circ}$

## A Straight line

is equal to 2 right angles measuring $180^{\circ}$
horizontal
vertical

| angles | acute, obtuse, reflex, <br> right-angle |
| :--- | :--- |
| polygon | 2D shapes formed of <br> straight lines |
| regular <br> polygons | Have equal sides and <br> equal angles |
| irregular <br> polygons | Do not have equal <br> sides or equal angles |
| vertical lines | Lines in an up-down <br> direction |
| horizontal <br> lines | Lines in a left-right <br> direction |
| parallel lines | Lines that are always <br> the same distance <br> apart |
| perpendicular <br> lines | Lines that are at right <br> angles to each other |
|  | A flat surface on a solid <br> shape |
| face | A line segment <br> between faces |
| edge | A corner |
| vertex | The highest part <br> forming a point |
| apex |  |

Angles on a straight line total $180^{\circ}$

Angles around a point total $360^{\circ}$

| $1 / 4$ turn | $1 / 2$ turn | $3 / 4$ turn | full turn |
| :---: | :---: | :---: | :---: |
| 1 right angle | 2 right angles | 3 right angles | 4 right angles |
| $90^{\circ}$ | $180^{\circ}$ | $270^{\circ}$ | $360^{\circ}$ |

A polygon is a 2 dimensional (2D) shape formed with straight lines.
Regular polygons have sides that are equal and angles that are equal.
In irregular polygons, sides and angles are not equal.
